

## Setup All West Ethernet on OS X Snow Leopard

1. Click on the System Preferences icon in your dock or click on the Apple icon in the upper right corner of your screen and then click on System Preferences.
2. Next click on the Network icon located in the Internet & Wireless section.

3. Next select Ethernet from the list on the left. At the top choose Home from the Locations drop down menu. If you are setting up a network away from your home it might be wise to create a new location. Select Using DHCP from the Configure IPv4 drop down menu.

5. Click Apply.
6. Close System Preferences and open your web browser of choice.
7. You might be asked to enter you User Name and Password for you All West email account to verify your computers id. After doing so it is a good idea to restart your computer and then open your web browser again. You should now be able to surf the internet. If you are experiencing problems open your network settings again and verify everything is correct. If the problem still persists please feel free to call All West at 435-783-4361 for assistance.
